

Track Installation Information California Speedway

The iCard setup at Fontana is a good installation and delivers good track coverage. The antenna coaxial cable is run from inside timing and scoring (location of the end of the cable is shown in Figure 2) and runs to the Junction Box on the roof. There is about 15' of antenna cable coiled inside the roof-top Junction Box. The antenna has, up to now, been temporarily placed on front awning support (constructed of 4" pipe) nearest the Junction Box.

Most recently, an antenna was delivered to the track and left in the care of Philip Tucker (Office 909-429-5552 Cell 909-578-2999). Phil may remember Gypsy White (the iCard operator with whom he worked during the IRL event in 2004). Other contacts are: Security Supervisor : Jeffrey Mead Cell 909-702-3459 Front Gate 909-429-5566, SBC –Dry Pairs/Phones: Mark Holecek Cell 951-522-2499

Installation layout is shown below.
